Personal Summary

Data economist and analyst with strong experience in Python, SQL, and advanced analytics, delivering impactful insights and automation in Vodafone. Proven track record of dashboard development, machine learning, and statistical modelling, recognised with multiple Vodafone Star Awards. Currently pursuing a part-time Master's in Economics and Data Science at the University of Cambridge, demonstrating self-motivation, determination, and continuous learning. Published on Medium and active on GitHub, combining technical expertise with thought leadership.

Skills

- **Programming & Analytics:** Python (NumPy, Pandas, scikit-learn, TensorFlow, Gradio), R, SQL (MSSQL, BigQuery)
- **Machine Learning & Statistical Methods:** K-Means, PCA, NLP, Neural Networks (RNNs, Transformers), Predictive Modelling, Econometrics, Forecasting, Statistical Analysis
- **Data Engineering & Tools:** Apache Airflow, CI/CD, Git, Docker, Cloud Platforms (GCP), ETL Pipelines
- **Data Visualisation & BI:** Tableau, QlikSense, Power BI, Power Apps, Power Automate
- **Other:** API Development, Automation, Dashboard Design, A/B Testing, Exploratory Data Analysis

Technical Experience

Channels Insight Analyst / Product Owner – Vodafone Group UK, Paddington

August 2023 – Present

- Led the **design and delivery of a data analytics product** from concept to production – a heatmap tool that brings business and commercial teams closer to actionable data, improving decision-making and alignment across functions.
- Partnered with cross-functional development teams to design, build, and launch the tool, translating business needs into technical solutions.
- Reduced end-of-month reporting time by 70% through automation and restructuring of Tableau dashboards.
- Delivered monthly reporting on 4 key KPIs to senior leadership across 11+ markets, providing critical insights into performance.
- Conducted deep analysis of KPI trends, identified anomalies, and implemented root cause investigations to improve accuracy and insight.
- Introduced an automated stakeholder issue-reporting system for web KPIs, reducing manual effort and email traffic by 90% and improving transparency.

Technology Discover Graduate – Vodafone Group UK, Newbury/Paddington

September 2021 – August 2023

Channels and Products Data Analytics Team – Data Scientist

- Collaborated with data scientists and engineers to design a CI/CD framework using Apache Airflow and Cloud Composer for automated ML model training.
- Built a BigQuery data pipeline to ingest and transform over 1TB of data in real time, improving accuracy and availability across multiple sources.
- Applied statistical modelling and anomaly detection to reduce API errors by 50%, presenting findings through dashboards for business teams.

Internal Audit Data Analytics Team – Data Analyst

- Partnered with audit teams to deliver six high-impact analytics audits, creating 15 advanced analytics products in SQL and Python.
- Built 10 interactive dashboards to synthesise complex audit information into actionable insights for stakeholders.

- Developed and implemented data models to improve business intelligence accuracy and decision-making efficiency.

Vodafone Business Insights Team – Data Analyst

- Automated ETL processes with Python, saving 15 hours of manual work weekly and reducing operational risk.
- Developed a web scraping tool to create targeted mailing lists, cutting stakeholder communication time by 80%.
- Guided cross-functional teams in adopting agile and lean practices for analytics delivery.

Education

University of Cambridge – MPhil in Economics and Data Science (Part-time)

2025 – Present

- Currently pursuing a part-time Master's degree, developing advanced expertise in data science, econometrics, machine learning, and economic analysis while working full-time.

Queen Mary, University of London – BSc (Hons) Economics, Mathematics and Statistics

2017 – 2020

- Achieved First Class Honours.
- Awarded Queen Mary Annual Fund Scholarship (2018).
- Key modules: Numerical Computing with C++ (99%), Introduction to Machine Learning.

London Academy of Excellence – A-Levels

2015 – 2017

- Further Mathematics (A*), Mathematics (A*), Economics (B).

Other Experience & Projects

Udacity (Accenture) – Data Scientist Nanodegree - 2024

- Developed predictive models using scikit-learn and conducted A/B testing to solve business problems, demonstrating applied machine learning.
- Engineered ETL pipelines and performed exploratory data analysis with Python (pandas, NumPy) to extract actionable insights from large datasets.
- Built an end-to-end ML pipeline using NLTK for sentiment analysis and text preprocessing of disaster response messages, deployed via Flask for real-time classification.
- Published technical documentation and tutorials and maintained code versioning to showcase technical communication and collaborative development skills.

Vodafone TechBoost – Technical Developer

2023

- Achieved runner-up position in Vodafone's internal innovation competition, working in a cross-functional team of seven over six months.
- Utilised advanced 3D mapping software to visualise drone flight paths across UK borders.
- Presented the solution to an audience of 100+, including senior leadership.

Vodafone Hack-alympics – Team Leader

2024

- Led a team of four to develop a prototype AI image generator with a pre-grounding step using bounding boxes to specify size, position, and orientation for branding teams.
- Delegated work, managed timelines, and delivered a complete pitch and working prototype within two days.
- Pitched the business case to Vodafone senior management.
